EXTENSION SNAP-ED
COMMUNITY PARTNERSHIPS

The University of Minnesota Extension’s SNAP-Education Community Partnership Funding supports 15 local, regional and statewide agencies through grant money for 2016. The partner agencies work to improve the health of Minnesotans with limited resources by implementing changes in the policies, systems, and the environment in their communities. Each grantee was required to enact at least one MFC strategy.

Intended Impacts:
• Bring about policy, system, and environment change using strategies to help break down barriers to healthy eating
• Improve the health of Minnesotans with limited financial resources

Related Food Charter Strategies:
• Strengthen community food assets
• Support food policy councils at local, regional, and state levels
• Provide patients with information about food skills education and referrals to relevant community resources

“We are learning from and working beside partners to improve the health of Minnesota communities.”

Ryan Johnson, Associate Program Director, University of Minnesota Extension SNAP-Ed
